RE: FY24 CDS Request – City of Aurora Pressure Regulating Valve (PRV)  
Improvements Project

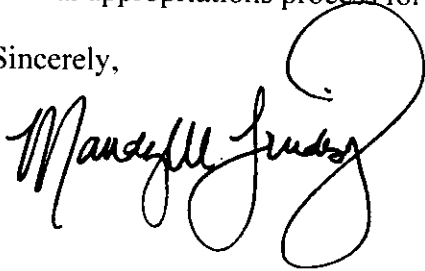

Dear Representative Crow,

I am writing in support of the City of Aurora's FY24 Congressionally Directed Spending request for the Pressure Regulating Valve (PRV) Improvements Projects. PRVs installed in the 1950's and 1960's will be relocated away from high traffic intersections, upgraded for worker safety, and improve water delivery services for approximately 71,000 customers.

PRVs are critical components to any drinking water distribution system to ensure proper pressure and flow are always maintained. There are thirteen PRV assets across Aurora's water distribution system that have a high priority for being relocated and upgraded to meet today's safety standards, minimize future traffic disruptions, and support the excellence of our water distribution system. This project for all thirteen PRV locations will be ready for construction in 2024. CDS funds will be used for construction upgrades to these essential water distribution features in an expedited and efficient manner.

I strongly urge Congress to include this Congressionally Directed Spending request as part of the federal appropriations process for FY24.

Sincerely,

A handwritten signature in black ink, appearing to read "Mandie J. J. J.", with a large, stylized flourish at the end.
